# e-activ Advanced Glass Coating Detector

The **e-activ** provides a reliable method of identifying the presence of specialist glass coatings on IGU's and sheet glass including Pilkington **Activ**<sup>™</sup> the world's first self-cleaning glass.

**e-activ** can also detect a wide range of low-e and solar control coatings used in commercial and domestic glazing applications.

Using **e-activ** installers and fabricators can ensure the correct orientation of coatings eliminating unnecessary remedial work.

## Key Features

- Accurately discriminates between Pilkington **Activ**<sup>™</sup> and low-e /solar control coatings.
- Stable, microprocessor based measurement technology.
- Operating glass thickness range 2.4 mm - 6.0 mm.
- Indicates applied surface for low-e and solar control coatings.
- Language neutral icon based display.
- Ergonomic hand held design - suitable for gloved operation.
- Rugged case with soft grip over moulding.
- Operates in high ambient light levels.
- Extended battery life - typically 40,000 measurements.
- Low battery and read error indication.
- Tested and approved by Pilkington.
- CE marked.
- 12 month warranty

## Applications

- Pre-production - glass manufacture / logistics.
- Glazing unit fabrication.
- Pre-installation verification.
- Installed glazing surveys.

## Typical Users

- Quality control.
- Assembly and installation personnel.
- Building compliance officers.
- Building surveyors.
